

- 1- Create Grid Classes for xs , sm , md , lg , xl , xxl screens to allocate content within your Grid , Grid Consist of 12 columns per screen , add container class , row class , offset per screens then use your Grid Classes to produce responsive design for the attached html file (named **3.markup_old.html**)
 - Add any required classes in your Saas file

2- Create your Sass classes to have the following output

```
<header>
  <h1>This is SASS</h1>
</header>
</div>
<div id="content">
  <p>Hello World! This is some awesome content for my
  SASS page. SASS is preety cool and makes life easier
  for copying and pasting. </p>
</div>
<footer>
  <p>This is the footer to my terrible SASS website
  lol</p>
</footer>
```

This is SASS

Hello World! This is some awesome content for my SASS page. SASS is preety cool and makes life easier for copying and pasting.

This is the footer to my terrible SASS website lol
